

Michael is a professor at the University of South Carolina Columbia.

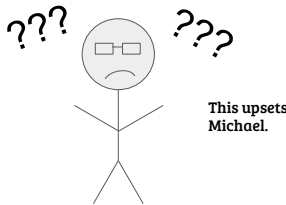

Online

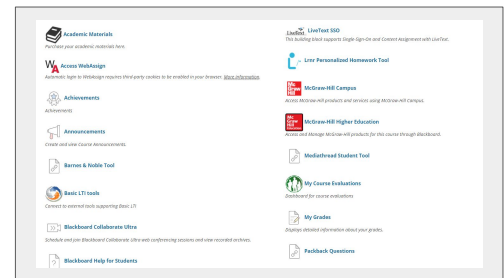

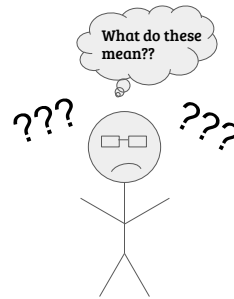

In Person

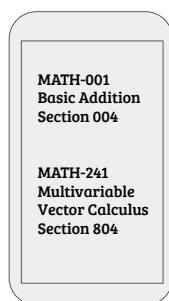

He teaches multiple classes, both online and in person.

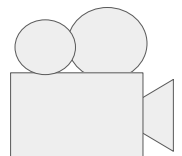

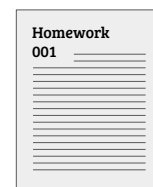

However, given the COVID-19 pandemic, he does not have a consolidated means of assigning work and communicating with students that are learning remotely.

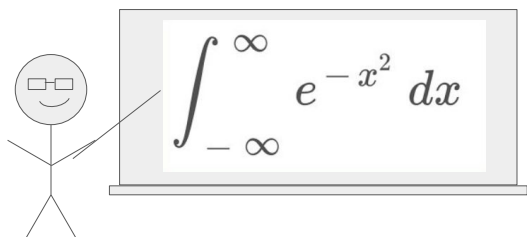

Michael would also like to avoid the clutter and unnecessary features of a service like Blackboard, simply picking and choosing the features he needs.

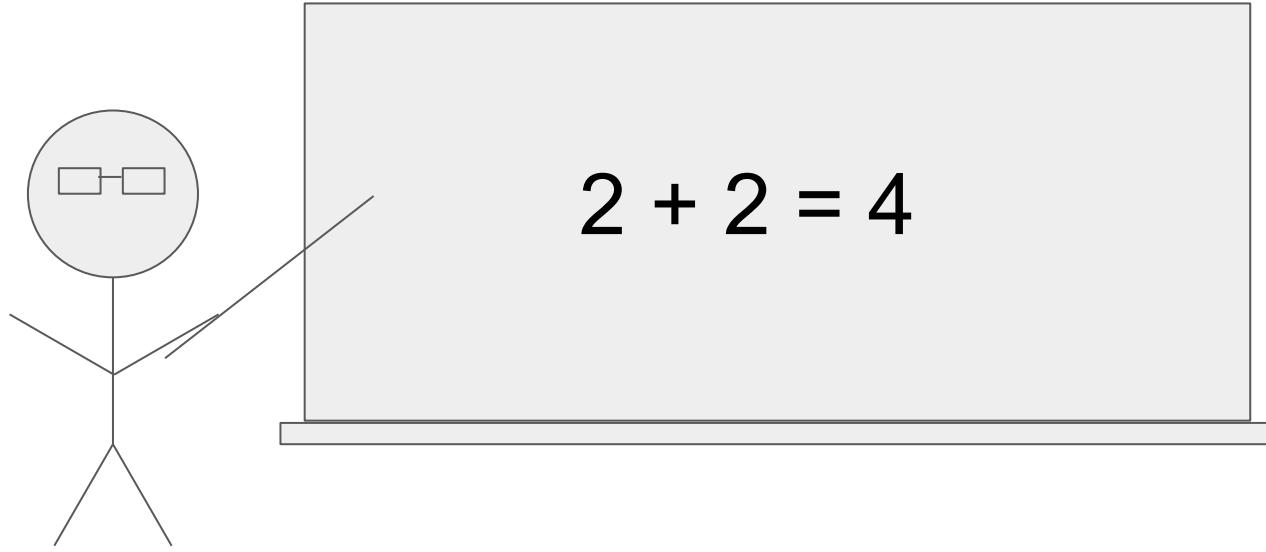

Luckily, he can simply download the UofSC app and set up a classroom for each section he teaches.

The app allows Michael to directly communicate with his students via messages, assign work, submit grades, and even livestream his lectures to his students.

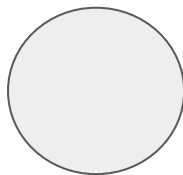

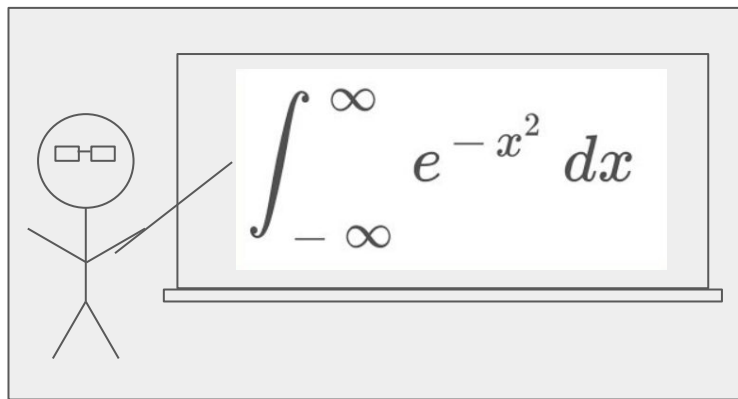

Michael no longer has to worry about HOW he can teach - with the UofSC App, he can now solely focus on the quality of his lessons.

Jerry is a freshman STEM student at the University of South Carolina Columbia.

He is taking all of his classes online due to COVID-19.

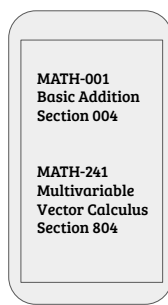

Since Jerry is new to USC, he is trying his best to transition to the new learning environment. But, with all of his classes being online, he is having a hard time staying organized and keeping up with his classes.

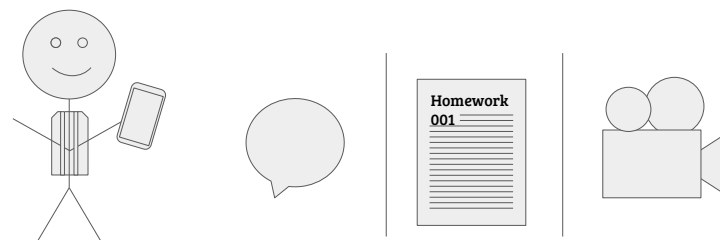

Blackboard

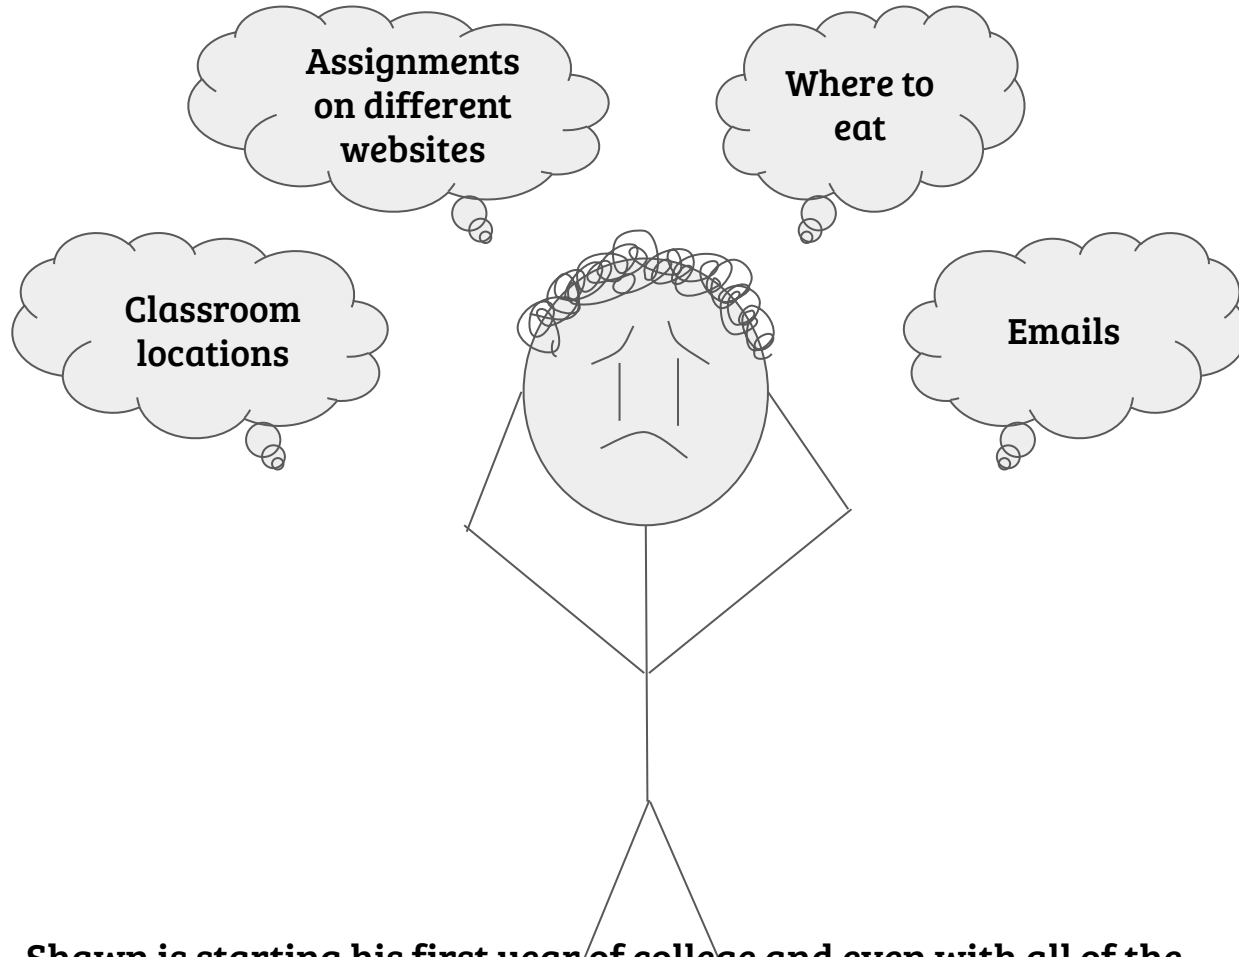

All the different websites and softwares used by his professors makes him feel overwhelmed and confused.

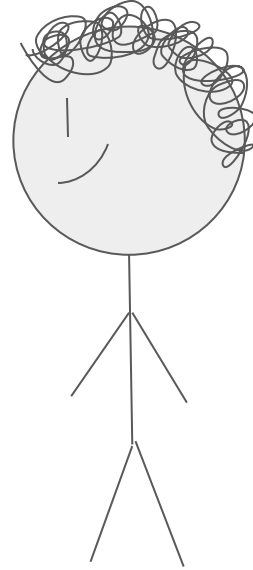

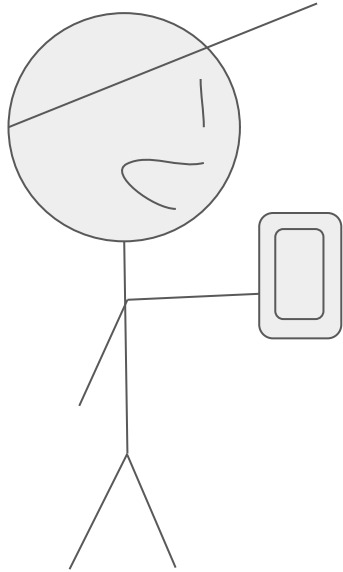

Luckily for Jerry, he can just download the UofSC app and see all of his course content in one centralized location.

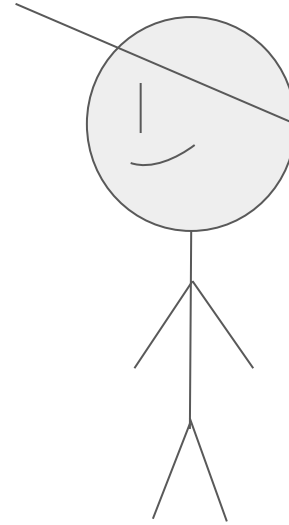

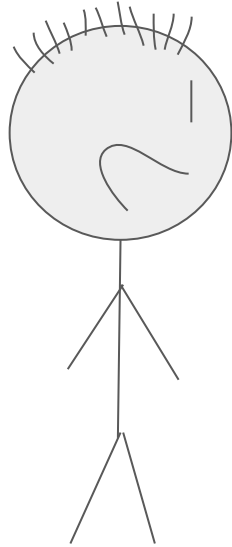

Now that he can view lectures, submit assignments, communicate with professors, and much more all with one app, Jerry feels much better about transitioning to the college experience.

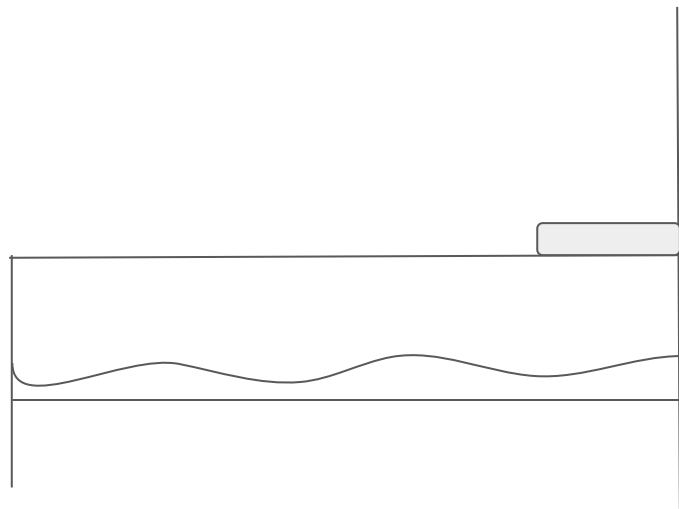

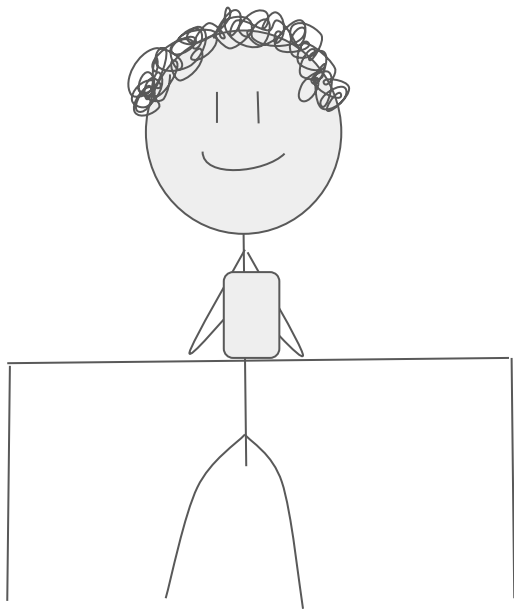

Shawn is starting his first year of college and even with all of the help and resources he has he's still struggling with keeping up with everything.

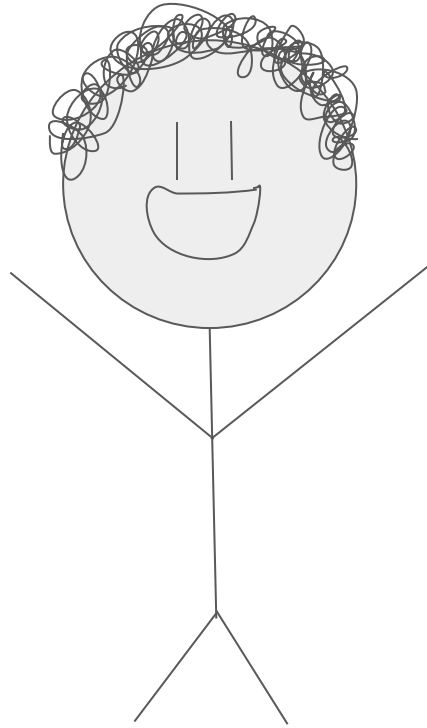

Shawn's friend Chris tells him about a website that has all the things he needs and more. He'll be able to access the websites he needs to do his assignments on, see the different dining areas around campus, and access a map that will show him where his classes are.

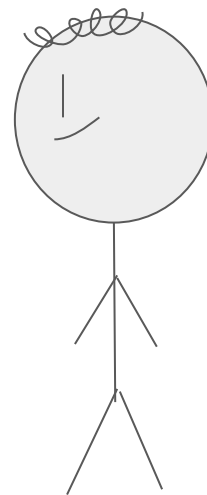

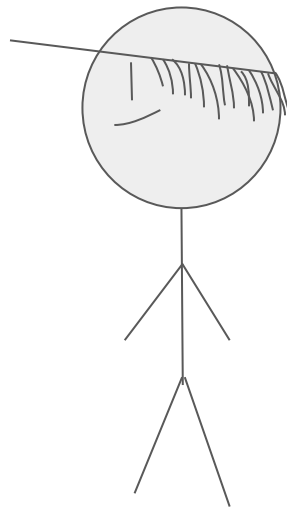

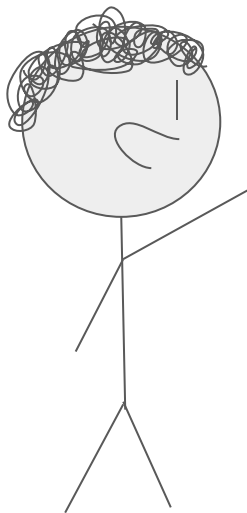

Chris had been in the same situation until his friend DJ told him he knew just the thing he needed to be more successful. He told him the website made him feel a lot less stressed and helped him raise his grades.

Later that night Shawn decides to sign up just to check it out.

2 weeks later, Shawn feels a lot less stressed and in control of his academics since he started using the website.

Shawn tells his friends about the website in hopes that it will help them too!
